

Tokenized Hemp Carbon Credit Ecosystem

Bridging regenerative agriculture, gold-backed finance, and satellite-powered climate traceability.

Our platform seamlessly integrates gold-backed stablecoins with hemp-based carbon sequestration, creating a sustainable and profitable carbon credit ecosystem. By Tokenizing hemp cultivation projects, we enable farmers, investors, as well as institutions to participate in the carbon offset market while benefiting from real-world agricultural production.

connect@axpt.io

A Decentralized Carbon Credit Finance system Backed by Land, Gold, and Satellite Connectivity.

HOW IT WORKS: Earth to Ether

Carbon Farming through high-yield hemp cultivation

Hemp captures 4x more CO₂ Per acre than trees.

Build biodiversity & soil regeneration

Field-level data traceability via IoT & satellite

LEO satellites + smart sensors track carbon data

Enables verifiable, real-time ESG monitoring

On-chain tokenization of carbon output

Smart contracts record carbon capture

NFT or asset-backed tokens issued per farm/project

Financial stability through AXG gold reserve

All transactions use a 1:1 gram gold-pegged stablecoin

Enhances investor confidence and asset liquidity.

Seamless global access to verified carbon offsets.

Institutions & Individuals offset emissions

Farmers stake or sell for yield & earnings.

Strategic Outcomes:

Regenerative Infrastructure

Carbon-positive cultivation at scale

Hemp fields double as climate assets, restoring land while capturing 4x more CO₂ than trees.

Traceable Carbon Intelligence

Soil-to-token verification via satellite

LEO satellites + IoT devices create live carbon telemetry for global ESG registries.

Gold-Backed Liquidity

Stable finance rooted in real assets

AXG stablecoin ensures price integrity and seamless carbon credit transactions.

Global Market Access

Farmers, landowners, investors: connected through one platform

Rural communities join the carbon economy via tokenized offsets and yield-bearing staking.

This ecosystem transforms regenerative action into measurable, tradable value - secured by gold, traced by satellite, and powered by land.

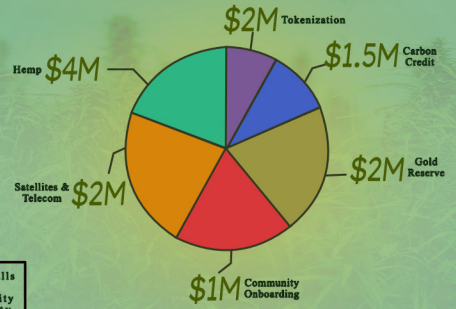

SYSTEM COMPONENTS + INVESTMENT BREAKDOWN

 Hemp Sequestration Infrastructure  Equipment, soil sensors & carbon data capture	 Tokenization & Blockchain Integration Tokenization, smart contracts & registry
 Satellite & Telecom Layer Integration LEO data traceability	 Carbon Credit Verification & ESG Certification Verra, Gold Standard auditing
 Community Onboarding & Farmer Ecosystem Training, co-cops, mobile access	 Gold Reserve & Stablecoin Liquidity AXG stablecoin peg + pool expansion

Category	Use
Infrastructure & Onboarding	Hemp, Satellite, Farmer Tools
Finance & Stability	Tokenization, Gold Reserve, Compliance

\$12.5M INVESTMENT REQUEST

Infrastructure + Liquidity for Regenerative Asset System

Backed by The Victoria Falls Stock Exchange for Institutional-grade liquidity and regulatory integrity

CAPITAL SUMMARY

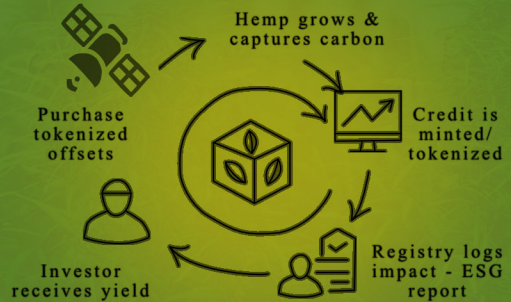

\$12.5 unlocks a full-stack regenerative finance ecosystem rooted in land, verified by satellite, secured by gold.

Carbon becomes currency. Land becomes liquidity. And communities become part of the chain.

Participation Matrix

Role	Action	Benefit
 Farmer	Stake or sell carbon credits	Income, digital Identity autonomy
 Institution	Purchase Tokenized offsets	Environmental Social & Governance (ESG) compliance verified reporting
 Investor	Fund Carbon Farming / Purchase fractional credits.	Return via AXG-staked credits & Appreciating carbon tokens & Low-barrier entry to carbon markets
 ESG Registry	Verify + list credits	Real-time traceability on-chain data

Tokenized Carbon Credit Utility Flow

CAPITAL SUMMARY

A system for those who wish to earn by healing - and track it, block by block.

A system for those who wish to earn by healing - and track it, block by block.

CONCLUSION

A future-proof financial system build from regenerative value.

This is not merely a proposal, it is a living system designed to regenerate both land and ledger. A self-sustaining economic model where carbon becomes currency, participation becomes profit, and every action is traceable from soil to satellite.

Through our access to a syndicated network of communal farmers, we are equipped with over 2,000 hectares of fertile land, ready for initial hemp cultivation forming the bedrock of large-scale carbon sequestration.

Backed by the Victoria Falls Stock Exchange, this initiative ensures institutional-grade liquidity, gold-backed financial integrity, and a verifiable path to global climate markets.
